ROTATOR CUFF REPAIR AND BICEPS TENODESIS REHABILITATION PROTOCOL

	RANGE OF MOTION	SLING	EXERCISES
PHASE I 0-2 weeks	0-2 weeks: Gentle PROM	Worn at all times, day and night**	0-2 weeks: hand/wrist ROM, grip strengthening and pendulums at home only
	Passive elbow flexion, active extension	Off for hygiene and home exercises	Elbow PROM okay
		according to instruction sheets	*Avoid active elbow flexion, resisted supination, and eccentric load on biceps until 6 wks *Lower body, core, and gentle stationary bike okay as tolerated if in sling and not using arm
PHASE II	Begin shoulder PROM	Sling worn daytime	Begin PROM as tolerated, Codman's,
2-4 weeks	up to 90° FE, 45° ER, 20° extension, 45° abduction, 45° ABER	only**	posterior capsule mobilizations, closed chain scapular stabilizations; avoid stretch of anterior capsule and extension
	Continue elbow ROM above		*No resisted elbow flexion or supination, eccentric load on biceps until 6 wks
PHASE III	Begin AAROM/AROM-	4-6 weeks: Worn only	Continue phase II exercises; begin active-
4-12 weeks	advance to 140° forward elevation, 135° abduction, 90° ABER, 45° ABIR	during day, during activity, to protect biceps**	assisted exercises, resistive exercises for scapular stabilizers, triceps, and rotator cuff
	Progress to AAROM and AROM at elbow after 6 weeks		8wks: Deltoid/rotator cuff isometrics, start biceps resistance exercises
PHASE IV 12-16 weeks	Gradual return to full AROM	None	Advance activities in Phase III; emphasize external rotation and latissimus eccentrics, glenohumeral stabilization
			Begin muscle endurance activities (upper body ergometer)
			Cycling/running as tolerated at 12 weeks
PHASE V 4-6 months**	Full and pain-free	None	Aggressive scapular stabilization and eccentric strengthening; scapular perturbation
			Advance therabands and dumbbells as tolerated
			Begin plyometric, throwing/sports related program, continue with endurance activities
			Maintain ROM and flexibility
PHASE VI; 6-8 months	Full and pain-free	None	Progress Phase V activities, return to full activity as tolerated

^{*}If a distal clavicle excision is performed, cross body adduction is restricted until 8 weeks post-op

^{**}May remove sling if arm is supported on chair/desk/table (ie desk work, eating) or if cognizant of protecting biceps

^{**}Patient protocols may vary. Please follow patient-specific script if modified
